

International event on off-grid electricity supplies

Exhibition and evening events will bring experts and visitors together.

On 28th and 29th September in Memmingen in Southern Germany, experts from around the world will be meeting for the fifth time at the Off-Grid Experts Workshop. There, over 30 event partners and exhibitors will be offering an informative and interactive sector forum for off-grid electricity supplies. The workshop concept was developed by the system integrator Phaesun, and the premium event partner is Steca Elektronik.

At the Off-Grid Experts Workshop the organisers will be putting off-grid electricity supplies using renewable energy in the spotlight. During the two days, companies and sector institutions will be presenting their product innovations and services within the framework of the Off-Grid Exhibition. International experts will be presenting best-practice examples and technical system solutions, especially looking at experiences from real-life use.

The organisers highly value communicative exchanges and the transfer of know-how. Visitors to the workshop can thus put together their own individual programme and take part in a wide range of sessions, expert lectures, do-it-yourself workshops and networking activities. The sessions consist of best-practice presentations, a spontaneous running discussion, business speed dating and the assembling station, where all participants can get some hands-on experience. This year as well, there is a tech day on the day before the workshop; on 27th September various manufacturers will be running comprehensive product training sessions in Memmingen.

Lots of know-how, good entertainment and awards

As a special guest, the drum trio Playmobeat from Berlin will be entertaining the participants with their programme "Energetic Independence". The supporting and evening programmes include a photo exhibition, a chill-out lounge and much more. Additionally, the event aims to provide enough time and space for direct dialogue with experts from the solar sector. The themes of the presentations and workshops all look at off-grid supplies of solar, wind and hydropower, without exception. Rural electrification, as well as solar-powered water supplies and water purification take centre stage, but industrial applications and off-grid energy supplies for recreation are also covered. The prize ceremony for the Off-Grid Experts Awards, in cooperation with the Alliance for Rural Electrification (ARE), is seen as a highlight of the workshop and takes place on the second day. The jury will be making awards in four categories for exceptional performance, innovation and particular impressions from the field of off-grid electricity supplies. The winners will be presented with the Off-Grid Experts' Trophy during the award ceremony, followed by the party night. The workshop is aimed at experts from the energy sector, businessmen, installers, retailers, representatives of governmental and non-governmental organisations engaged in development partnerships, scientists and researchers, as well as private individuals.

Off-Grid Experts Workshop at a glance

- 28th and 29th September 2017 at Stadthalle Memmingen
- Exhibition and workshop programme from 9 am to 4 pm
- Evening events (Award Ceremony and Party Night)
- Participation fee: € 195
